

DISTRIBUTION BOARDS

ECS offers the Distribution boards which are especially suitable for commercial buildings, residential and similar installations. They may be used also in industrial installations. They are manufactured for mounting into hollow in walls, for concealing type and on the plaster walls as surface mounting type for both indoor and outdoor applications. All DBs made out of 16SWG or as specified with high grade CR mild steel sheets fabrication. Distribution boards fulfill all the requirements for constructing low-voltage electrical distribution installations. These can be used in such very simple applications as lighting, or motor control circuits as well as in the most demanding applications those requires highly configured with high rated currents, or high short-circuiting resistance.

ECS offers a wide range of distribution boards for every application. The product ranges are in modular conceptions distinguished by multiple combinations and customized construction possibilities. This makes them equally suitable for all areas of electrical power transmission and distributions. Our (ECS) skilled technical and professional team has capability for quick planning and production, safe operation according to the desired specifications and requirements of the client.

ECS also provides outdoor type distribution boards with canopies for outdoor applications, fully Gasketed to prevent ingress of moisture, dust and dirt. As per IP-55 protection class
